Console Gaming Projector I X500i

V 1.00

# Warranty and Copyright information

#### Limited warranty

BenQ warrants this product against any defects in material and workmanship, under normal usage and storage.

Proof of purchase date will be required with any warranty claim. In the event this product is found to be defective within the warranty period, BenQ's only obligation and your exclusive remedy shall be replacement of any defective parts (labor included). To obtain warranty service, immediately notify the dealer from which you purchased the product of any defects.

Important: The above warranty shall be void if the customer fails to operate the product in accordance with BenQ's written instructions, especially the ambient humidity must be in-between 10% and 90%, temperature in-between 0°C and 35°C, altitude lower than 4920 feet, and avoiding to operate the projector in a dusty environment. This warranty gives you specific legal rights, and you may have other rights which vary from country to country.

For other information, please visit www.BenQ.com.

# Important safety instructions

Your projector is designed and tested to meet the latest standards for safety of information technology equipment. However, to ensure safe use of this product, it is important that you follow the instructions mentioned in this manual and marked on the product.

1. Please read this manual before you operate your projector. Save it for future reference.

2. Do not look straight at the projector lens during operation. The intense light beam may damage your eyes.

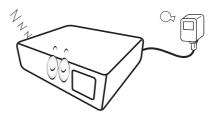

3. Refer servicing to qualified service personnel.

4. The light source becomes extremely hot during operation.

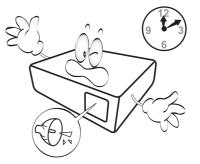

5. In some countries, the line voltage is NOT stable. This projector is designed to operate safely within a mains voltage between 100 to 240 volts AC, but could fail if power cuts or surges of ±10 volts occur. In areas where the mains voltage may fluctuate or cut out, it is recommended that you connect your projector through a power stabilizer, surge protector or uninterruptible power supply (UPS).

6. Do not block the projection lens with any objects when the projector is under operation as this could cause the objects to become heated and deformed or even cause a fire. To temporarily turn off the light source, press the **ECO BLANK** button.

7. Do not operate light sources beyond the rated light source life.

 Do not place this product on an unstable cart, stand, or table. The product may fall, sustaining serious damage.

 Do not attempt to disassemble this projector. There are dangerous high voltages inside which may cause death if you should come into contact with live parts.

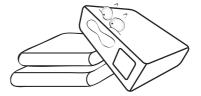

Under no circumstances should you ever undo or remove any other covers. Refer servicing only to suitably qualified professional service personnel.

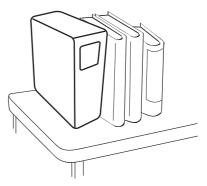

- 10. Do not block the ventilation holes.
  - Do not place this projector on a blanket, bedding or any other soft surface.
  - Do not cover this projector with a cloth or any other item.
  - Do not place inflammables near the projector.

If the ventilation holes are seriously obstructed, overheating inside the projector may result in a fire. 11. Always place the projector on a level, horizontal surface during operation.

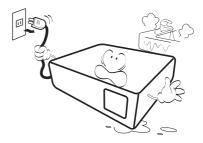

12. Do not stand the projector on end vertically. Doing so may cause the projector to fall over, causing injury or resulting in damage to the projector.

 Do not step on the projector or place any objects upon it. Besides probable physical damage to the projector, doing so may result in accidents and possible injury.

14. Do not place liquids near or on the projector. Liquids spilled into the projector may cause it to fail. If the projector does become wet, disconnect it from the power supply's power outlet and call BenQ to have the projector serviced.

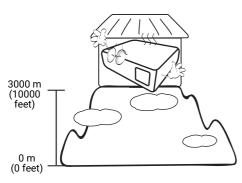

15. This product is capable of displaying inverted images for ceiling mount installation.

- 16. Do not place this projector in any of the following environments.
  - Space that is poorly ventilated or confined. Allow at least 50 cm clearance from walls and free flow of air around the projector.
  - Locations where temperatures may become excessively high, such as the inside of a car with all windows rolled up.
  - Locations where excessive humidity, dust, or cigarette smoke may contaminate optical components, shorten the projector's life span and darken the image.

- Locations near fire alarms
- Locations with an ambient temperature above  $40^\circ\text{C}$  /  $104^\circ\text{F}$
- Locations where the altitudes are higher than 3000 m (10000 feet).

- 17. This apparatus must be earthed.
- When the projector is under operation, you may sense some heated air and odor from its ventilation grill. It is a normal phenomenon and not a product defect.

## Risk Group 2

- 1. According to the classification of photobiological safety of light source and light source systems, this product is Risk Group 2, IEC 62471-5:2015.
- 2. Possibly hazardous optical radiation emitted from this product.
- 3. Do not stare at operating light source. May be harmful to the eyes.
- 4. As with any bright source, do not stare into the direct beam.

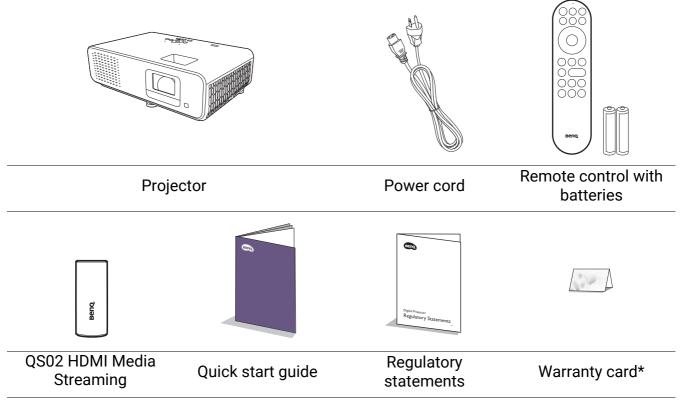

To avoid damaging the DLP chips, never aim a high-power laser beam into the projection lens.

# Introduction

# Shipping contents

Carefully unpack and verify that you have all of the items shown below. If any of these items are missing, please contact your place of purchase.

#### Standard accessories

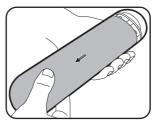

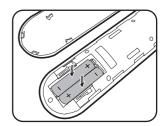

• The supplied accessories will be suitable for your region, and may differ from those illustrated.

• \*The warranty card is only supplied in some specific regions. Please consult your dealer for detailed information.

#### Replacing the remote control batteries

- 1. Press and slide off the battery cover, as illustrated.
- 2. Remove the old batteries (if applicable) and install two AAA batteries. Make sure that the positive and negative ends are positioned correctly, as illustrated.
- 3. Slide the battery cover in until it clicks into place.

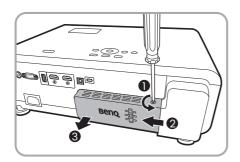

• Avoid leaving the remote control and batteries in an excessive heat or humid environment like the kitchen, bathroom, sauna, sunroom or in a closed car.

- Replace only with the same or equivalent type recommended by the battery manufacturer.
- Dispose of the used batteries according to the manufacturer's instructions and local environment regulations for your region.
- Never throw the batteries into a fire. There may be danger of an explosion.
- If the batteries are dead or if you will not be using the remote control for an extended period of time, remove the batteries to avoid damage to the remote control from possible battery leakage.

# Installing the QS02 HDMI Media Streaming

The supplied QS02 HDMI Media Streaming is an Android TV (ATV) dongle to be used with the projector. See the instructions below to install the dongle. With a successful installation, you can enjoy more entertainment programs through this projector.

- 1. Make sure the projector is turned off and the power cord is disconnected.
- Loosen the screws that secure the top of projector cover ①. Slide to remove the cover ②③.

3. Plug the USB Micro B cable to the dongle.

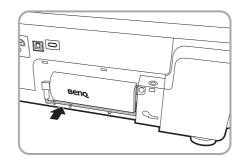

4. Plug the dongle to the HDMI\* port on the projector.

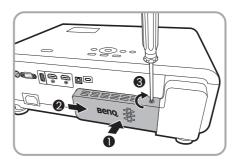

\*This HDMI port is for connecting QS02 HDMI Media Streaming only.

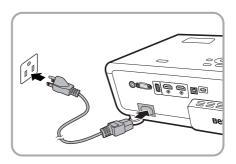

5. Arrange the USB Micro B cable in place below the dongle.

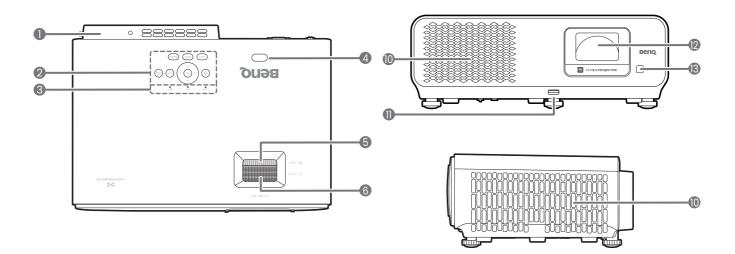

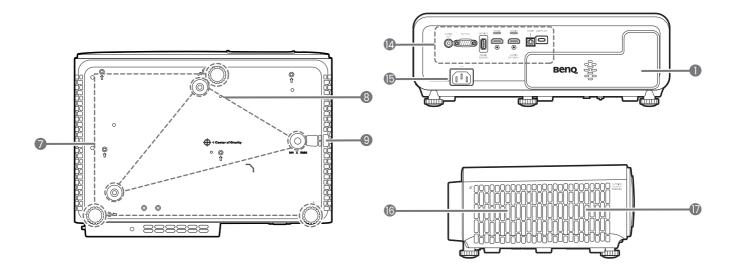

Replace the projector cover ①②, and tighten the screws③.

# Projector exterior view

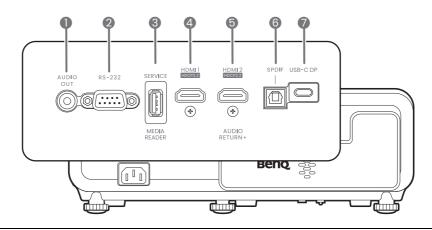

- QS02 HDMI Media Streaming port (Android TV dongle) See Installing the QS02 HDMI Media Streaming on page 9 for how to remove the cover.
- 2. External control panel See Controls and functions on page 12.
- 3. LIGHT/TEMP/POWER status indicator See Indicators on page 51.
- 4. IR remote sensor
- 5. Zoom ring
- 6. Focus ring
- 7. Adjuster feet
- 8. Ceiling mount holes

- 9. Anti-theft security bar
- 10. Vent (air inlet)
- 11. Adjuster button Push up to release the front adjuster foot.
- 12. Projection lens
- 13. IR remote sensor
- 14. Connector panel See Terminals on page 11.
- 15. AC power jack
- 16. Vent (air exhaust)
- 17. Speaker grill

# Terminals

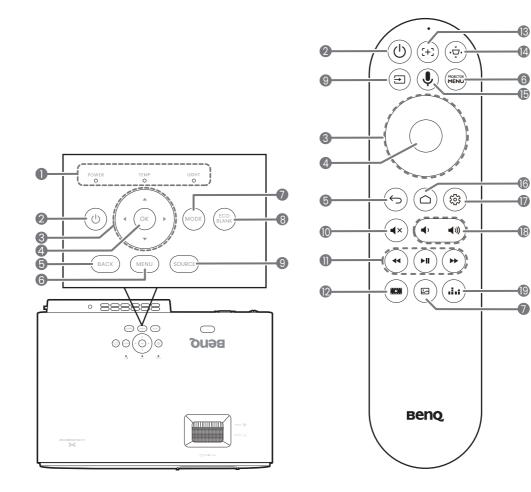

- 1. Audio output jack
- 2. RS-232 control port

- 6. SPDIF audio output port
- 7. USB-C DP port
- 3. USB 2.0 Type-A port (Firmware upgrade, Media Reader)
- 4. HDMI input port (Version 2.0b, HDCP 2.2)
- 5. HDMI input port (Version 2.0b, HDCP 2.2, Audio Return+)

# Controls and functions

# Projector & Remote control

All the key presses described in this document are available on the remote control or projector.

1. **POWER/TEMP/LIGHT** status indicator See Indicators on page 51.

#### 2. (**b**) **POWER**

Toggles the projector between standby mode and on.

3. Arrow keys ( $\blacktriangle$ ,  $\blacktriangledown$ ,  $\triangleleft$ ,  $\blacktriangleright$ )

When the On-Screen Display (OSD) or the Android TV menu is activated, these keys are used as directional arrows to select the desired menu items and to make adjustments.

When OSD and Android TV menu is inactive, workable under CEC-capable sources only.

#### 4. OK

- Confirms the selected Android TV or On-Screen Display (OSD) menu item.
- Under Android TV media playback, plays or pauses a video or audio file.
- 5. BACK/ (5)

Goes back to previous OSD menu, exits and saves menu settings.

6. MENU/

Turns on/off the On-Screen Display (OSD) menu.

7. MODE/ 🖾

Displays the picture mode menu.

#### 8. ECO BLANK

Used to hide the screen picture.

Do not block the projection lens from projecting as this could cause the blocking object to become heated and deformed or even cause a fire.

9. SOURCE/ ∋

Displays the source selection bar.

10. **•**×

Toggles projector audio between on and off.

11. (•) (•)

Under Android TV source, rewinds, plays/pauses, forwards multimedia files.

12.

Displays the Game Settings menu.

13. (+-)

Press to open/close Auto focus page. \*Available on compatible projectors only.

14. (׬¬́,

Displays the keystone menu. See Correcting keystone on page 18 for details.

15. ()

Press and hold to activate the voice assistant or voice search. Hold this key and speak to the microphone at the top of the remote control while using voice assistant.

16. 🔿

Opens Android TV Home page.

17. 🐵

Under Android TV source, opens the setting menu for the current application.

18. 🔹 🐝

Decreases or increases the projector volume.

19. 📖

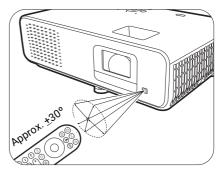

Press to switch between sound modes.

## Remote control effective range

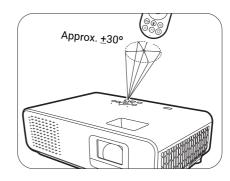

The remote control must be held at an angle within 30 degrees perpendicular to the projector's IR remote control sensor(s) to function correctly. The distance between the remote control and the sensor(s) should not exceed 8 meters (~ 26 feet).

Make sure that there are no obstacles between the remote control and the IR sensor(s) on the projector that might obstruct the infra-red beam.

· Operating the projector from the front

· Operating the projector from the top

# Positioning your projector

# Choosing a location

Before choosing an installation location for your projector, take the following factors into consideration:

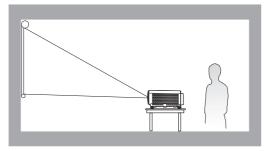

- Size and position of your screen
- Electrical outlet location
- · Location and distance between the projector and the rest of your equipment

The projected image size and vertical offset depend on how far you place the projector, and the zoom setting you choose. There is more information from Projection dimensions on page 15 which can help decide exact distance and height of your projector.

You can install your projector in the following ways.

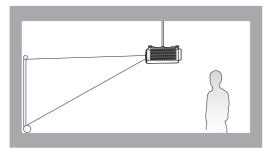

#### 1. Front

Select this location with the projector placed on the table in front of the screen. This is the most common way to position the projector for quick setup and portability.

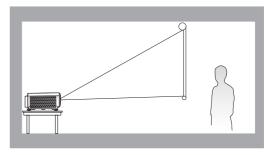

#### 2. Front Ceiling

Select this location with the projector suspended upside-down from the ceiling in front of the screen. Purchase the BenQ Projector Ceiling Mount Kit from your dealer to mount your projector on the ceiling.

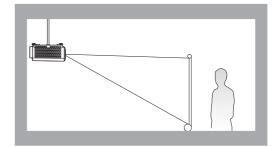

#### 3. Rear

Select this location with the projector placed on the table behind the screen. Note that a special rear projection screen is required.

#### 4. Rear Ceiling

Select this location with the projector suspended upside-down from the ceiling behind the screen. Note that a special rear projection screen and the BenQ Projector Ceiling Mount Kit are required for this installation location.

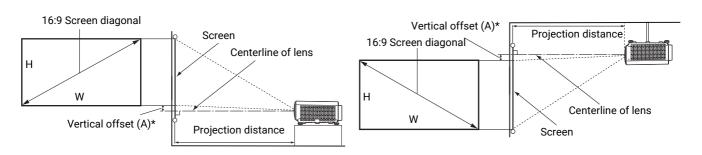

After turning on the projector, the projector will automatically select a suitable setting for the way the projector is installed. If not, go to **Advanced** menu - **Installation** > **Projector Position**, press **OK** and press **∢**/**▶** to select a setting.

# Obtaining a preferred projected image size

The distance from the projector lens to the screen, the zoom setting, and the video format each factors in the projected image size.

## **Projection dimensions**

• The screen aspect ratio is 16:9 and the projected picture is in a 16:9 aspect ratio

- \*The vertical offset value is the vertical distance from the bottom edge of the image (when the projector is placed on a table, diagram on the left), or top edge of the image (when the projector is ceiling mounted, diagram on the right) to the centerline of lens.
- Due to the lens optical characteristics, every projector has its vertical offset ratio. The vertical offset value normally gets larger while the projection distance increases.

	Scree	n size		Distan	*Vertical offset (A)			
Diag	jonal H (mm) M		nal H (mm) W (mm)		Min length Average		(Lowest/Highest	
Inch	mm		•• ()	(max. zoom)	Average	(min. zoom)	lens position) (mm)	
60	1524	747	1328	917	1009	1102	19	
70	1778	872	1550	1069	1178	1286	22	
80	2032	996	1771	1222	1346	1470	25	
90	2286	1121	1992	1375	1514	1654	28	
100	2540	1245	2214	1528	1682	1837	31	
110	2794	1370	2435	1680	1851	2021	34	
120	3048	1494	2657	1833	2019	2205	37	

For example, if you are using a 120-inch screen, the recommended projection distance is 2019 mm.

If your measured projection distance is 200 cm, the closest match in the "Distance from screen (mm)" column is 2019 mm. Looking across this row shows that a 120" (about 3.0 m) screen is required. The projected image will be slightly higher/lower than the lens centerline with 37 mm vertical offset.

0

To optimize your projection quality, we suggest doing the projection by referring to the values listed in the non-gray rows.

All measurements are approximate and may vary from the actual sizes.

BenQ recommends that if you intend to permanently install the projector, you should physically test the projection size and distance using the actual projector in situ before you permanently install it, so as to make allowance for this projector's optical characteristics. This will help you determine the exact mounting position so that it best suits your installation location.

# Mounting the projector

If you intend to mount your projector, we strongly recommend that you use a proper fitting BenQ projector mounting kit and that you ensure it is securely and safely installed.

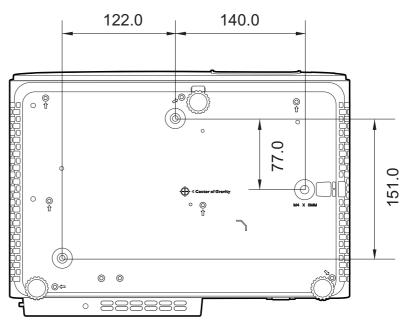

If you use a non-BenQ brand projector mounting kit, there is a safety risk that the projector may fall down due to an improper attachment through the use of the wrong gauge or length screws.

## Before mounting the projector

- Purchase a BenQ projector mounting kit from the place you purchased your BenQ projector.
- BenQ recommends that you also use a security cable to secure both the base of the mounting bracket and the security bar on the projector. This will perform the secondary role of restraining the projector should its attachment to the mounting bracket become loose.
- Ask your dealer to install the projector for you. Installing the projector on your own may cause it to fall and result in injury.
- Take necessary procedures to prevent the projector from falling off such as during an earthquake.
- The warranty doesn't cover any product damage caused by mounting the projector with a non-BenQ brand projector mounting kit.
- Consider the surrounding temperature where the projector is ceiling mounted. If a heater is used, the temperature around the ceiling may be higher than expected.
- Read the user manual for the mounting kit about the range of torque. Tightening with torque exceeding the recommended range may cause damage to the projector and subsequently falling off.
- Make sure the power outlet is at an accessible height so that you can easily shut down the projector.

# Ceiling/Wall mount installation diagram

#### Unit: mm

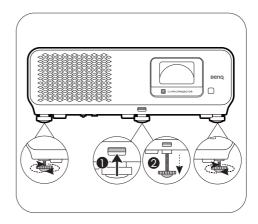

Please refer to the user manual of the mounting kit or contact BenQ service center if any installation problem occurs.

# Adjusting the projected image

# Adjusting the projection angle

If the projector is not placed on a flat surface or the screen and the projector are not perpendicular to each other, the projected image becomes trapezoidal. You can screw the adjuster feet to fine-tune the horizontal angle.

To retract the feet, screw the adjuster feet in a reverse direction.

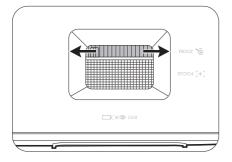

Do not look into the lens while the light source is on. The strong light from the light source may cause damage to your eyes.

# Fine-tuning the image size and clarity

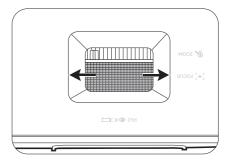

1. Adjust the projected image to the size that 2. Sharpen the image by rotating the focus you need using the zoom ring.

ring.

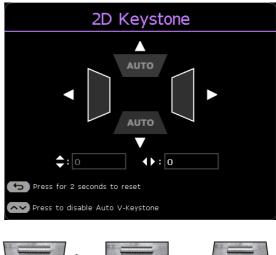

# Correcting keystone

Keystoning refers to the situation where the projected image becomes a trapezoid due to angled projection.

To correct the distorted image:

- 1. Display the **2D Keystone** correction page from the following menus.
  - The setup wizard during the projector initial setup
  - The Basic menu system
  - The Installation menu of the Advanced menu system
- 2. After the **2D Keystone** correction page appears:
  - To correct keystoning at the top of the image, use ▼.
  - To correct keystoning at the bottom of the image, use  $\blacktriangle$ .
  - To correct keystoning at the right side of the image, use  $\triangleleft$ .
  - To correct keystoning at the left side of the image, use  $\blacktriangleright$ .
  - To reset the keystone values, press **BACK**/ $(\backsim)$  for 2 seconds.
  - · To automatically correct the vertical sides of the distorted image, press OK for 2 seconds.
- 3. When done, press **BACK**/( $\leftarrow$ ) to save your changes and exit.

Press V.

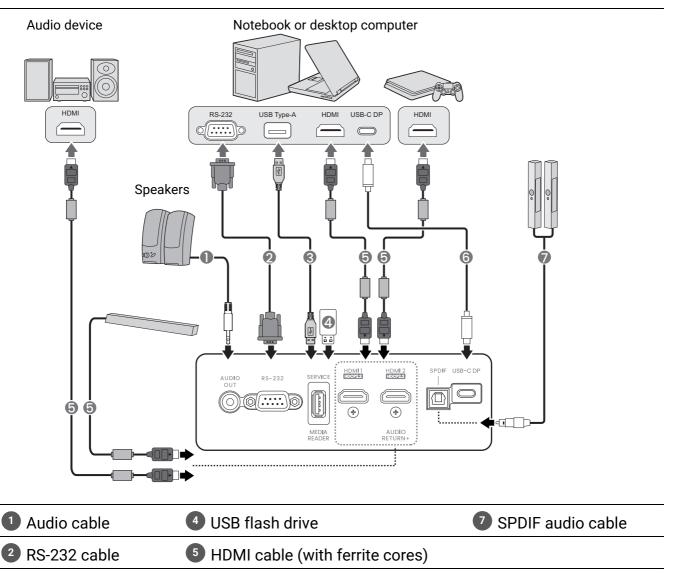

Press <.

Press ►.

# Connection

When connecting a signal source to the projector, be sure to:

- 1. Turn all equipment off before making any connections.
- 2. Use the correct signal cables for each source.
- 3. Ensure the cables are firmly inserted.

**3** USB Type-A cable **6** USB Type-C cable

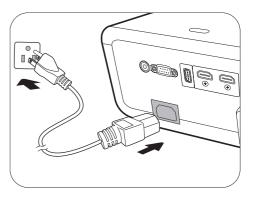

- In the connections above, some cables may not be included with the projector (see Shipping contents on page 7). They are commercially available from electronics stores.
- The connection illustrations are for reference only. The rear connecting jacks available on the projector vary with each projector model.
- Many notebooks do not turn on their external video ports when connected to a projector. Usually a key combo like FN + function key with a monitor symbol turns the external display on/off. Press FN and the labeled function key simultaneously. Refer to your notebook's documentation to find your notebook's key combination.
- If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.

# Operation

# Starting up the projector

- 1. Plug the power cord. Turn on the power outlet switch (where fitted). The power indicator on the projector lights orange after power has been applied.
- 2. Press (b) on the projector or remote control to start the projector. The power indicator flashes green and stays green when the projector is on.

The start up procedure takes about 15 seconds. In the later stage of starting up, a start-up logo is projected.

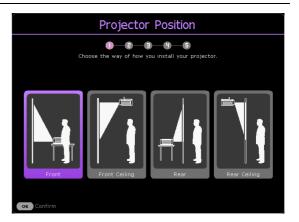

(If necessary) Rotate the focus ring to adjust the image clearness.

- 3. If this is the first time you turn on the projector, the setup wizard appears to guide you through setting up the projector. If you have already done this, skip this step and move on to the next step.
  - Use the arrow keys (◄/►/▲/▼) on the projector or remote control to move through the menu items.
  - Use **OK** to confirm the selected menu item.

#### Step 1:

#### Specify Projector Position.

For more information about projector position, see Choosing a location on page 14.

#### Step 2:

Reminder for using the supplied BenQ Android TV remote control

Operation 21

🕤 Return

Welcome message appears.

- 4. If you are prompted for a password, press the arrow keys to enter a 6-digit password. See Utilizing the password function on page 26.
- 5. Switch all of the connected equipment on.
- 6. The projector will search for input signals. The current input signal being scanned appears. If the projector does not detect a valid signal, the message "No Signal" will appear until an input signal is found.

You can also press  $\implies$  to select your desired input signal. See Switching input signal on page 28.

- Please use the original accessories (e.g. power cord) to avoid possible dangers such as electric shock and fire.
- If the projector is still hot from previous activity, it will run the cooling fan for approximately 90 seconds before energizing the light source.
- The Setup Wizard screenshots are for reference only and may differ from the actual design.
- If the frequency/resolution of the input signal exceeds the projector's operating range, you will see the message "Out of Range" displayed on the background screen. Please change to an input signal which is compatible with the projector's resolution or set the input signal to a lower setting. See Timing chart on page 55.
  - If no signal is detected for 3 minutes, the projector automatically enters saving mode.

# Setting up the QS02 HDMI Media Streaming

## Before you start

Check that you have:

- A Wi-Fi Internet connection
- A Google Account

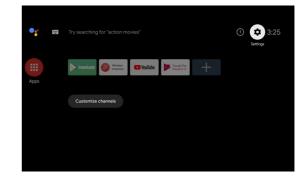

## Set up your device

There are 3 options to set up your device:

- Quick Setup using an Android phone
- Google **Quick Setup** d Phone, open the pre-installed app "Ge G 2. Type or say, "Ok Google, set up my device" 3. Tap QS01 (402) on the list Google Visit androidtv.com/setup tone or computer, go to the website above. Make sure your ce is on the same Wi-Fi network (Prj\_Lab\_Ext) as your QS01 de on your phone or comp 398985 Google Sign in Use your Google Account Forgot email -
- Using your phone or computer

Using your remote control

# Display Android TV home screen

 For more information, visit https://support.google.com/androidtv/. 

• Refer to the QS02 user documentations for further operating instructions.

# Using the menus

The projector is equipped with 2 types of On-Screen Display (OSD) menus for making various adjustments and settings. The **Basic** OSD menu provides primary menu functions while the **Advanced** OSD menu provides full menu functions.

To access the OSD menu, press (MENU) / (MENU) on the projector or remote control.

- Use the arrow keys (▲/▼/◀/►) on the projector or remote control to move through the menu items.
- Use **OK** on the projector or remote control to confirm the selected menu item.

The first time you use the projector (after finishing the initial setup), press *mu*/*mu*, and the **Basic** OSD menu will be displayed.

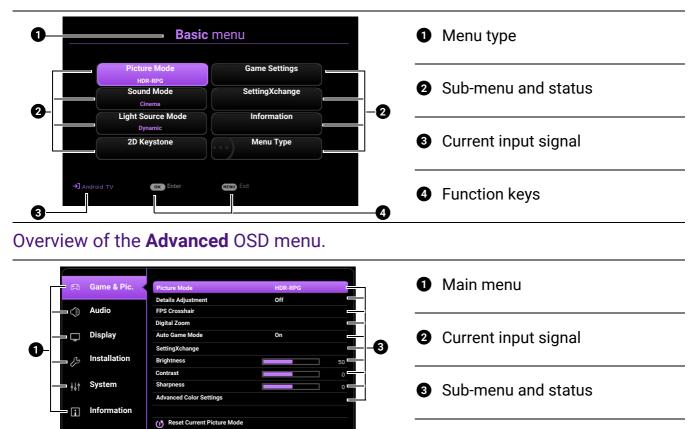

If you intend to switch from the **Basic** OSD menu to the **Advanced** OSD menu:

- 1. Go to Menu Type and press OK.
- 2. Use ▲/▼ to select Advanced and press OK. Your projector will switch to the Advanced OSD menu.

Likewise, when you wish to switch from the **Advanced** OSD menu to the **Basic** OSD menu, follow the instructions below:

- 1. Go to System > Menu Settings > Menu Type and press OK.
- 2. Use ▲/▼ to select **Basic** and press **OK**. Your projector will switch to the **Basic** OSD menu.

Overview of the Basic OSD menu.

The OSD screenshots are for reference only, and may differ from the actual design.

# Securing the projector

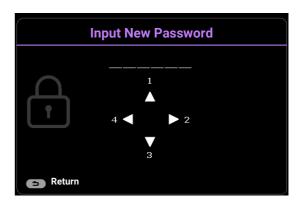

## Using a security cable lock

The projector has to be installed in a safe place to prevent theft. Otherwise, purchase a security cable to secure the projector. A security bar is located on the right side of the projector. See item 9 on page 10. Insert a security cable to the opening of the security bar and secure it to a nearby fixture or heavy furniture.

## Utilizing the password function

#### Setting a password

- 1. Go to **Advanced** menu **System** > **Security Settings**. Press **OK**. The **Security Settings** page appears.
- 2. Highlight Change Password and press OK.
- 3. The four arrow keys (▲, ►, ▼, ◄) respectively represent 4 digits (1, 2, 3, 4). According to the password you desire to set, press the arrow keys to enter six digits for the password.
- 4. Confirm the new password by re-entering the new password.
- To activate the Power On Lock function, go to System > Security Settings > Power On Lock, press OK and </ ► to select On. Input the password again.

• The digits being input will be displayed as asterisks on-screen. Make a note of your selected password and keep it in a safe place in advance or right after the password is entered so that it is available to you should you ever forget it.

• Once a password has been set and the **Power On Lock** is activated, the projector cannot be used unless the correct password is entered every time the projector is started.

#### If you forget the password

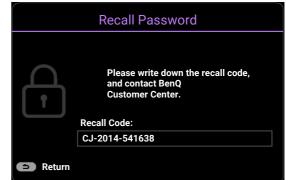

If you enter the wrong password, the password error message will appear, and the **Input Password** message follows. If you absolutely do not remember the password, you can use the password recall procedure. See Entering the password recall procedure on page 27.

Password Error Please try again.

If you enter an incorrect password 5 times in succession, the projector will automatically shut down in a short time.

#### Entering the password recall procedure

- 1. Press and hold **OK** for 3 seconds. The projector will display a coded number on the screen.
- 2. Write down the number and turn off your projector.
- 3. Seek help from the local BenQ service center to decode the number. You may be required to provide proof of purchase documentation to verify that you are an authorized user of the projector.

#### Changing the password

- 1. Go to **Advanced** menu **System** > **Security Settings**. Press **OK**. The **Security Settings** page appears.
- 2. Highlight Change Password and press OK.
- 3. Enter the old password.
  - If the password is correct, another message Input New Password appears.
  - If the password is incorrect, the password error message will appear, and the message

**Input Current Password** appears for your retry. You can press **BACK**/( $\bigcirc$ ) to cancel the change or try another password.

- 4. Enter a new password.
- 5. Confirm the new password by re-entering the new password.

#### Disabling the password function

To disable password protection, go to **Advanced** menu - **System** > **Security Settings** > **Power On Lock**, press **OK** and **∢**/▶ to select **Off.** The message **Input Password** appears. Enter the current password.

- If the password is correct, the OSD menu returns to the **Security Settings** page. You will not have to enter the password next time turning on the projector.
- If the password is incorrect, the password error message will appear, and the message

**Input Password** appears for your retry. You can press **BACK**/( $\bigcirc$ ) to cancel the change or try another password.

Though the password function is disabled, you need to keep the old password in hand should you ever need to re-activate the password function by entering the old password.

# Switching input signal

The projector can be connected to multiple devices at the same time. However, it can only display one full screen at a time. When starting up, the projector automatically searches for the available signals.

Be sure the **Advanced** menu - **Display** > **Auto Source Search** is **On** if you want the projector to automatically search for the signals.

To manually select the source:

- 1. Press  $\rightarrow$ . A source selection bar appears.
- 2. Press ▲ / ▼ until your desired signal is selected and press **OK**.

Once detected, the picture from the selected source will appear. If there is multiple equipment connected to the projector, repeat steps 1-2 to search for another signal.

• The brightness level of the projected image will change accordingly when you switch between different input signals.

• For best display picture results, you should select and use an input signal which outputs at the projector's native resolution. Any other resolutions will be scaled by the projector depending upon the "aspect ratio" setting, which may cause some image distortion or loss of picture clarity. See Aspect Ratio on page 40.

# Presenting from a Media Reader

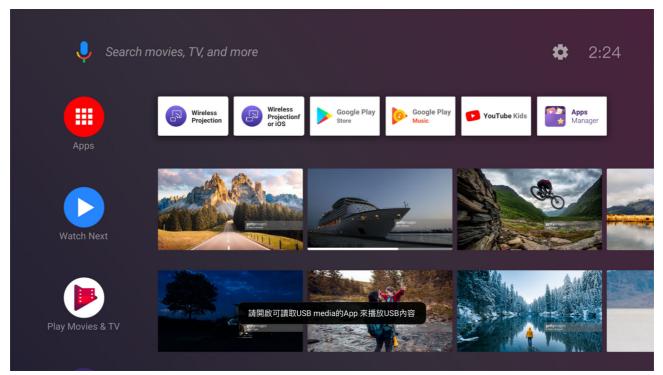

The USB Type-A port on the projector allows you to read/play the audio/video files stored on a USB flash drive connected to the projector. It can eliminate the need for a computer source.

	• .ts	

# Supported file formats

To view the files stored on a USB flash drive,

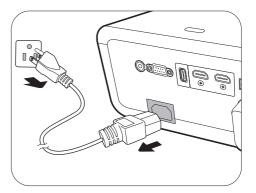

- 1. Plug a USB flash drive into the **MEDIA READER** port on the back of the projector.
- 2. Press 
  → (SOURCE) and select Media Reader. The projector displays the Android TV home screen.

- 3. Select and open the VLC App.
- 4. Select a folder or a file you want to display and press **OK**.

# Shutting down the projector

- 1. Press (b) and a confirmation message will appear prompting you. If you don't respond in a few seconds, the message will disappear.
- 2. Press (b) a second time. The power indicator flashes orange, the projection light source shuts down, and the fans will continue to run for approximately 15 seconds to cool down the projector.
- Once the cooling process finishes, the power indicator becomes a steady orange and the fans stop. Disconnect the power cord from the power outlet.

To protect the light source, the projector will not respond to any commands during the cooling process.

# Menu operation

Please note that the on-screen display (OSD) menus vary according to the signal type selected and the projector model you are using.

The menu items are available when the projector detects at least one valid signal. If there is no equipment connected to the projector or no signal detected, limited menu items are accessible.

# Function descriptions

Menu	Descriptions
	The projector is preset with several predefined picture modes so that you can choose one to suit your operating environment and input signal picture type.
	• Bright
	Maximizes the brightness of the projected image. This mode is suitable for environments where extra-high brightness is required, such as using the projector in well lit rooms.
	• RPG/HDR-RPG
	Provides CinematicColor and powerful cinema sound as if in a film-like and role-playing game world. <b>Sound Mode</b> will automatically switch to <b>Cinema</b> .
	HDR-RPG is selectable when the projector reads HDR contents.
	• FPS/HDR-FPS
	Enhances detail viewing experience by revealing all the enemies hidden in the dark shadow, and provides surrounding sound to hear the distant footsteps and gunshot and recognize their directions. <b>Sound Mode</b> will automatically switch to <b>FPS</b> .
Picture Mode	HDR-FPS is selectable when the projector reads HDR contents.
	• SPG/HDR-SPG
	Provides true colors and live vocal sound to enjoy a live broadcast sports game. <b>Sound Mode</b> will automatically switch to <b>SPG</b> .
	HDR-SPG is selectable when the projector reads HDR contents.
	• Cinema
	This mode is best for watching movies with accurate color and deepest contrast at lower brightness level in rooms with a bit of ambient light, as if in a commercial cinema.
	• 3D
	Appropriate for playing 3D images and 3D video clips. This mode is only available when 3D content is detected.
	• HDR10
	Delivers High Dynamic Range effects with higher contrasts of brightness and colors for HDR Blu-ray movies or HDR games. After auto-detecting metadata or EOTF info from HDR contents, <b>HDR10</b> will be selected.
Details Adjustment	Adjusts the level of detail clarity. The higher the effect, the more details will be shown but with lower black performance.

	If you need to display a crosshair on the screen for aiming at targets, follow the instructions below.					
	1. Press <b>OK</b> to display the <b>FPS Crosshair</b> page.					
	2. Press <b>OK</b> repeatedly to select a preferred crosshair type. Selecting 🚫					
	will not display a crosshair when you leave this page.					
	3. Press $A \gg A \ll A$ to move the crosshair to a desired position.					
FPS Crosshair	4. To return to the default position, press <b>BACK</b> / $\bigcirc$ for two seconds.					
	<ol> <li>When all the adjustments are done, press BACK/ (-&gt;) to save the changes and the crosshair will be displayed on the screen.</li> </ol>					
	When the crosshair is no longer needed:					
	1. Go back to this the <b>FPS Crosshair</b> page.					
	2. Press <b>OK</b> repeatedly to select the crosshair type 🔊, and press					
	<b>BACK</b> / $\bigcirc$ to save and leave the page.					
	Scales down the projection area within the range of 100% to 80% to adjust the size of the displayed image. 100% represents the original size of the image, and 80% represents a 20% reduction in size.					
Digital Zoom	This image adjustment might impact latency. We suggest setting the <b>Digital Zoom</b> values to 100% (the original size) to enjoy low latency gaming.					
Auto Game Mode	When a gaming console is connected and detected, the projector automatically selects a suitable <b>Picture Mode</b> for the type of input source to ensure the lowest possible input lag. If you switch back to other input sources, the projector will also revert to the previously selected picture mode, providing a seamless transition between gaming and other entertainment activities.					
	Selecting <b>Reset</b> will return all the customized settings under <b>Game</b> <b>Settings</b> (e.g. <b>Picture Mode</b> , <b>Details Adjustment</b> , <b>FPS</b> , etc.) to the factory default values.					
	To use this feature, connect your computer to the projector with a USB cable, then run the ' <b>SettingXchange</b> ' PC application.					
SettingXchange	<b>SettingXchange</b> is a software program designed to optimize projector's color and game settings for an enhanced viewing experience. It allows users to create and save custom settings, as well as download and apply settings created by other users. The software is user-friendly and provides a variety of customization options to tailor the projector's display to user's preferences.					
Brightness	The higher the value, the brighter the image. Adjust this control so the black areas of the image appear just as black and that detail in the dark areas is visible.					
Contrast	The higher the value, the greater the contrast. Use this to set the peak white level after you have previously adjusted the Brightness setting to sui your selected input and viewing environment.					
Sharpness	The higher the value, the sharper the picture becomes.					

#### Gamma Selection

Gamma refers to the relationship between input source and picture brightness.

- 1.8/2.0/2.1/BenQ: Select these values according to your preference.
- **2.2/2.3**: Increases the average brightness of the picture. Best for a lit environment, meeting room or family room.
- 2.4/2.5: Best for viewing movies in a dark environment.
- 2.6: Best for viewing movies which are mostly composed of dark scenes.

High Brightness Low Contrast	6									Low Brightness High Contrast
	<u>1.8</u>	<u>2.0</u>	<u>2.1</u>	<u>2.2</u>	<u>2.3</u>	<u>2.4</u>	<u>2.5</u>	<u>2.6</u>	<u>BenQ</u>	

#### Color Temperature Tuning

There are several preset color temperature settings available. The available settings may vary according to the signal type selected.

When **Bright** is selected for **Picture Mode**, the color temperature switches to **Native**, and cannot be changed.

- **Native**: With the light source's original color temperature and higher brightness, this setting is suitable for environments where high brightness is required, such as projecting pictures in well lit rooms.
- Normal: Maintains normal colorings for white.
- · Cool: Makes images appear bluish white.
- · Warm: Makes images appear reddish white.

You can also set a preferred color temperature by adjusting the following options.

- R Gain/G Gain/B Gain: Adjusts the contrast levels of Red, Green, and Blue.
- R Offset/G Offset/B Offset: Adjusts the brightness levels of Red, Green, and Blue.

To return all the settings to the factory default values, highlight **Reset**, and press **OK**.

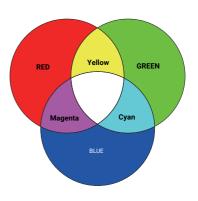

#### Advanced Color Settings

#### Color Management

The Color Management provides six sets (RGBCMY) of colors to be adjusted. When you select each color, you can independently adjust its range and saturation according to your preference.

To make adjustments, press the  $\blacktriangle/\checkmark$  arrows to highlight an independent color from among Red (R), Green (G), Blue (B), Cyan (C), Magenta (M), or Yellow (Y), and press **OK**. The following menu items are displayed for your choice.

• Hue: Increase in the range will include colors consisted of more proportions of its two adjacent colors. Please refer to the illustration for how the colors relate to each other. For example, if you select Red and set its range at 0, only pure red in the projected picture will be selected. Increasing its range will include red close to yellow and red close to magenta.

- Saturation: Adjusts the values to your preference. Every adjustment made will reflect to the image immediately. For example, if you select Red and set its value at 0, only the saturation of pure red will be affected.
- Gain: Adjusts the values to your preference. The contrast level of the primary color you select will be affected. Every adjustment made will reflect to the image immediately.

If you selected **White Balance** (W), you can adjust the contrast levels of Red, Green, and Blue by selecting **R Gain**, **G Gain**, and **B Gain**.

To return all the settings to the factory default values, highlight **Reset**, and press **OK**.

**Saturation** is the amount of that color in a video picture. Lower settings produce less saturated colors; a setting of "0" removes that color from the image entirely. If the saturation is too high, that color will be overpowering and unrealistic.

#### Light Source Mode

Selects a suitable light source power from among the provided modes. See Extending light source life on page 50.

#### HDR Brightness

The projector can automatically adjust the brightness levels of your image according to the input source. You can also manually select a brightness level to display better picture quality. When the value is higher, the image becomes brighter; when the value is lower, the image becomes darker.

#### Noise Reduction

Reduces electrical image noise caused by different media players.

Advanced Color Settings (Continued)

Reset Current Picture Mode	<ul> <li>Returns all of the adjustments you've made for the selected Picture Mode (including the preset mode, User) to the factory preset values.</li> <li>1. Press OK. The confirmation message is displayed.</li> <li>2. Use <!--▶ to select Reset and press OK. The current picture mode returns to the factory preset settings.</li--> </li></ul>
	CO The following settings will still remain: <b>Picture Mode, Auto Game Mode, SettingXchange</b> .

## 2. Main menu: Audio

#### Structure

Menu	Options		
Sound Mode		Cinema/Music/FPS/SPG/User	
	100Hz	-10 – +10	
	300Hz	-10 – +10	
Sound EQ	1kHz	-10 – +10	
Sound EQ	4kHz	-10 – +10	
	10kHz	-10 - +10	
	<b>Reset Sound EQ</b>		
Audio Output		treVolo/ <u>S/PDIF</u> /Audio Return+/3.5mm Jack	
Audio Output Format		Auto/LPCM/RAW (Up to 7.1)/RAW+ (Object-Based)	
Mute		Off/On	
Volume		0 - 20	
L/R Switch		Auto/Off/On	
Reset Audio		Reset/Cancel	

Menu	Descriptions			
Sound Mode	This function utilizes treVolo and Bongiovi DPS (Digital Power Station) Technology, which incorporates its patented algorithms with 120 calibration points that optimizes any audio signal in real time to add depth, clarity, definition, presence and enhanced stereo field imaging for more immersive audio experience. The following preset sounds are available: <b>Cinema, Music, FPS, SPG</b> , and <b>User</b> .			
	The <b>User</b> mode allows you to personalize the sound settings. When selecting the <b>User</b> mode, you may make manual adjustments with the <b>Sound EQ</b> function.			
	If the <b>Mute</b> function is activated, adjusting <b>Sound Mode</b> will turn off the <b>Mute</b> function.			
Sound EQ	Selects desired frequency bands (100 Hz, 300 Hz,1k Hz, 4k Hz, and 10k Hz) to adjust the levels according to your preference. The settings made here define the <b>Sound Mode</b> > <b>User</b> mode.			
	To return all the levels of the frequency bands to factory settings, highlight <b>Reset Sound EQ</b> and press <b>OK</b> .			
	Selects the audio output from internal or external speakers.			
Audio Output	To enjoy <b>S/PDIF</b> digital sound effect, make sure the <b>SPDIF</b> connector on the projector is connecting to a compatible audio system.			
	To enjoy <b>Audio Return+</b> sound effect, make sure to turn on the eARC/ARC function from your soundbar as well.			
	<b>Audio Return+</b> supports multi-audio outputs including 2.0, 5.1, 7.1 and Dolby Atmos to external audio systems like soundbars.			

Audio Output Format	The following audio output formats are provided to achieve the audio performance you desire: LPCM supports 2 channel audio output, RAW (Up to 7.1) supports up to 7.1 channel audio output, and RAW+ (Object-Based) supports Dolby Atmos audio output. The default setting Auto selects a suitable output format for the audio system.		
Mute	Select <b>On</b> to temporarily turn off the projector's internal speaker or the volume being output from the audio output jack.		
	To restore the audio, select <b>Off</b> .		
Volume	Adjusts the volume level of the projector's internal speaker or the volume being output from the audio output jack.		
	If the <b>Mute</b> function is activated, adjusting <b>Volume</b> will turn off the <b>Mute</b> function.		
L/R Switch	Automatically turns <b>On/Off</b> this function according to the projector position. The left and right audio channels will automatically swap when this function is <b>On</b> .		
Reset Audio	Returns all of the adjustments you've done under the <b>Audio</b> menu to the factory preset values.		

## 3. Main menu: Display

#### Structure

Menu	Options		
Aspect Ratio			Auto/4:3/16:9

	EDID	HDMI-1/HDMI-2	Enhanced/Standard
HDMI Settings	HDMI Device Control		Off/On
	Power On Link		Off/From Device
	Power Off Link		Off/From Projector
4K Upscaling			Off/On
Reset Display			Reset/Cancel

Menu	Descriptions			
	There are several options to set the image's aspect ratio depending on your input signal source.			
	This image adjustment might impact latency. We suggest setting <b>Aspect Ratio</b> to <b>Auto</b> to enjoy low latency gaming.			
	• Auto			
	Scales an image proportionally to fit the projector's native resolution in its horizontal or vertical width.			
Aspect Ratio	· 4:3			
	Scales an image so that it is displayed in the center of the screen with a 4:3 aspect ratio. $\bigcirc \bigcirc \bigcirc$			
	• 16:9			
	Scales an image so that it is displayed in the center of the screen with a 16:9 aspect ratio. $16:9 \text{ picture}$			
Auto Source Search	Allows the projector to automatically search for a signal.			

	Renames the current input source to your desired name.				
	On the <b>Source Rename</b> page: 1. Press <b>OK</b> to display the on-screen keyboard.				
Source Rename	<ol> <li>Press ▲/▼/◀/► to select each desired digit/letter, and press OK to confirm each input.</li> </ol>				
	3. Repeat the step above and when done, press <b>BACK</b> / (-5).				
	<ol> <li>Press ▼ to highlight Commit.</li> </ol>				
	5. Press <b>OK</b> and the source name changes.				
	This projector supports playing three-dimensional (3D) content transferred through your 3D-compatible video devices and contents, such as PlayStation consoles (with 3D game discs), 3D Blu-ray players (with 3D Blu-ray discs), and so on. After you have connected the 3D video devices to the projector, wear the BenQ 3D glasses and make sure the power is on to view 3D contents.				
	When watching 3D contents:				
	<ul> <li>The image may seem misplaced; however, this is not a product malfunction.</li> </ul>				
	<ul> <li>Take appropriate breaks when watching 3D contents.</li> </ul>				
	<ul> <li>Stop watching 3D contents if you feel fatigue or discomfort.</li> </ul>				
	<ul> <li>Keep a distance from the screen of about three times the effective height of the screen.</li> </ul>				
	<ul> <li>Children and people with a history of oversensitivity to light, heart problems, or any other existing medical conditions should be refrained from watching 3D contents.</li> </ul>				
3D	<ul> <li>The image may seem reddish, greenish, or bluish without wearing 3 glasses. However, you will not notice any color bias when watching 3 contents with 3D glasses.</li> </ul>				
	<ul> <li>The 4K source will not be displayed.</li> </ul>				
	· 3D Mode				
	The default setting is <b>Auto</b> and the projector automatically chooses an appropriate 3D format when detecting 3D contents. If the projector cannot recognize the 3D format, you can choose <b>Frame Sequential</b> , <b>Frame Packing</b> , <b>Top-Bottom</b> , or <b>Side by Side</b> for it.				
	When this function is enabled:				
	<ul> <li>The brightness level of the projected image decreases.</li> </ul>				
	• The <b>Picture Mode</b> cannot be adjusted.				
	<ul> <li>The 2D Keystone can only be adjusted within limited degrees.</li> </ul>				
	· 3D Sync Invert				
	When your 3D image is distorted, enable this function to switch between				

the image for the left eye and the right eye for more comfortable 3D viewing experience.

#### • Signal Format

Selects a suitable RGB color range to correct the color accuracy.

- **Auto**: Automatically selects a suitable color range for the incoming HDMI signal.
- Limited: Utilizes the Limited range RGB 16-235.
- Full: Utilizes the Full range RGB 0-255.

#### Equalizer

Sets a suitable value to maintain the HDMI/Android TV picture quality in long distance data transmission.

#### • EDID

Switches between **Enhanced** for HDMI 2.0 EDID and **Standard** for HDMI 1.4 EDID. Selecting **Standard** which supports up to 1080p 60Hz may solve abnormal display issues with some old players.

## HDMI Settings • HDMI Device Control

When you enable this function and connect an HDMI CEC-compatible device (e.g. QS02, a soundbar) to your projector, the projector remote control/keypad can control the device's menu or volume during the projector power-on state.

#### Power On Link/Power Off Link

When you connect an HDMI CEC-compatible device to your projector with an HDMI cable, you can set the behavior of powering on/off between the device and the projector.

	Power On Link > From DeviceWhen the connected device is turned on, the projecto will be activated, too.			
	Power Off Link > From ProjectorWhen the projector is turned off, the connected will be shut down, too.			
4K Upscaling	Enables or disables 4K resolution.	"XPR always ON" which upscales all input timings to		
Reset Display	Returns all the settings in the <b>Display</b> main menu to the factory default values.			

## 4. Main menu: Installation

### Structure

Menu	Options		
Projector Position	n Auto/Front/Front Ceiling/Rear/Rear Ceiling		
2D Kovatana		H: -30 – +30	
2D Keystone		V: -30 - +30	
	LumiExpert	Off/On	
	LumiExpert Level	-1 - 0 - 1	
LumiExpert		Manual Calibration Status	
	Manual Calibration	Calibrate	
		Reset Manual Calibration	
Test Pattern		Off/On	
High Altitude Mode		Off/On	
Baud Rate		9600/14440/19200/38400/57600/115200	

Menu	Descriptions		
Projector Position	The projector can be installed on a ceiling or behind a screen, or with one or more mirrors. See Choosing a location on page 14 for details.		
	See Correcting keystone on page 18 for details.		
2D Keystone	This image adjustment might impact latency. We suggest setting the <b>2D</b> <b>Keystone</b> values to 0 to enjoy low latency gaming.		
	• LumiExpert		
	When this function is enabled, the projector actively detects the ambient light conditions and automatically adjusts balanced visual brightness to create an optimum viewing experience.		
LumiExpert	CO This function is not available when the <b>Picture Mode</b> is <b>Bright, 3D</b> , or <b>HDR10</b> . • LumiExpert Level		
Lumexpert	Adjusts the gamma offset.		
	Manual Calibration		
	According to the ambient brightness, you can do the calibration manually.		
	<ul> <li>Manual Calibration Status: Shows the status of manual calibration.</li> </ul>		
	<ul> <li>Calibrate: Enact this item to start the calibration process.</li> </ul>		
	<ul> <li>Reset Manual Calibration: Resets the gamma offset to factory preset values.</li> </ul>		

Test Pattern	Adjusts the image size and focus and check that the projected image is free from distortion.		
	We recommend you use the <b>High Altitude Mode</b> when your environment is between 1500 m–3000 m above sea level, and ambient temperature is between 0°C–30°C.		
	Operation under " <b>High Altitude Mode</b> " may cause a higher decibel operating noise level because of increased fan speed necessary to improve overall system cooling and performance.		
High Altitude Mode	If you use this projector under other extreme conditions excluding the above, it may display auto shut-down symptoms, which is designed to protect your projector from over-heating. In cases like this, you should switch to High Altitude mode to solve these symptoms. However, this is not to state that this projector can operate under any and all harsh or extreme conditions.		
	Do not use the <b>High Altitude Mode</b> if your altitude is between 0 m and 1500 m and ambient temperature is between 0°C and 35°C. The projector will be over cooled, if you turn the mode on under such a condition.		
Baud Rate	Selects a baud rate that is identical with your computer's so that you can connect the projector with a suitable RS-232 cable and update or download the projector's firmware. This function is intended for qualified service personnel.

# Maintenance

# Care of the projector

## Cleaning the lens

Clean the lens whenever you notice dirt or dust on the surface. Please be sure to turn off the projector and let it cool down completely before cleaning the lens.

- · Use a canister of compressed air to remove dust.
- If there is dirt or smears, use lens-cleaning paper or moisten a soft cloth with lens cleaner and gently wipe the lens surface.
- Never use any type of abrasive pad, alkaline/acid cleaner, scouring powder, or volatile solvent, such as alcohol, benzene, thinner or insecticide. Using such materials or maintaining prolonged contact with rubber or vinyl materials may result in damage to the projector surface and cabinet material.

Please note that it is normal to have some dust on the lens surface. If it needs lens clean, please never remove any parts of the projector.

Contact your dealer or local customer service center if the projector fails to operate as expected.

## Cleaning the projector case

Before you clean the case, turn the projector off using the proper shutdown procedure as described in Shutting down the projector on page 30 and unplug the power cord.

- To remove dirt or dust, wipe the case with a soft, lint-free cloth.
- To remove stubborn dirt or stains, moisten a soft cloth with water and a neutral pH detergent. Then wipe the case.

Never use wax, alcohol, benzene, thinner or other chemical detergents. These can damage the case.

## Storing the projector

If you need to store the projector for an extended time, please follow the instructions below:

- Make sure the temperature and humidity of the storage area are within the recommended range for the projector. Please refer to Specifications on page 53 or consult your dealer about the range.
- Retract the adjuster feet.
- Remove the battery from the remote control.
- Pack the projector in its original packing or equivalent.

## Transporting the projector

It is recommended that you ship the projector with its original packing or equivalent.

# Light source information

## Getting to know the light hour

When the projector is in operation, the duration (in hours) of light source usage is automatically calculated by the built-in timer. The method of calculating the equivalent light hour is as follows:

- Light Usage Time = (x+y+z) hours, if Time used in Normal Mode = x hours Time used in ECO Mode = y hours Time used in Dynamic Mode = z hours
- 2. Equivalent Light Hour =  $\alpha$  hours

$$\alpha \; = \; \frac{A'}{X} \times \chi + \frac{A'}{Y} \times y + \frac{A'}{Z} \times z$$
 , if

X= light source life spec of **Normal Mode** 

Y= light source life spec of ECO Mode

Z= light source life spec of Dynamic Mode

A' is the longest light life spec among X, Y, Z.

- For time used in each light source mode shown in OSD menu:
- Time used is accumulated and rounded down to an integer in **hours**.
- When time used is less than 1 hour, it shows 0 hours.

When you calculate **Equivalent Light Hours** manually, it will probably have deviation from the value shown in OSD menu since projector system calculates time used for each light source mode in "Minutes" then rounds down to an integer in hours shown in OSD.

To obtain the light source information:

Go to Advanced Menu - System > Light Source Information and press OK. The Light Source Information page appears.

You can also get the light hour information on the Information menu.

## Extending light source life

#### Setting the Light Source Mode

Go to Advanced Menu - Game & Pic. > Advanced Color Settings > Light Source Mode and press OK, ∢/► to select a suitable light source power from among the provided modes.

Setting the projector in ECO Mode, or Dynamic Mode extends light life.

Light Source Mode	Descriptions		
Normal Mode	Provides full light brightness		
ECO Mode	Lowers brightness to extend the light life and decreases the fan noise		
Dynamic Mode	Adjusts the light power automatically depending on the content brightness level while optimizing display quality.		

#### Setting Auto Power Off

This function allows the projector to turn off automatically if no input signal is detected after a set period of time to prevent unnecessary waste of light source life.

To set **Auto Power Off**, go to **Advanced Menu - System > Operation Settings > Power On/Off Settings > Auto Power Off**, and press **OK**, **∢/▶** to set a period of time.

The light source (LED) can last around 20,000-30,000 hours and no need to be changed during the lifetime of the projector mostly. When it is needed, LED replacement is not user-serviceable. Please contact the service center for assistance.

### Indicators

Indicator			Status & Description
POWER	TEMP	LIGHT	Status & Description
			Power events
	0	0	Stand-by mode
۲	0	0	Powering up
	0	0	Normal operation
۲	0	0	Normal power-down cooling
۲	۲	٠	Download
	0	$\bigcirc$	Light source life exhausted
	0	0	Burn-in ON
			Burn-in OFF
			Light source events
0	0		Light source error in normal operation
			Thermal events
		0	Fan 1 error (the actual fan speed is outside the desired speed)
	۲	0	Fan 2 error (the actual fan speed is outside the desired speed)
	$\bigcirc$	0	Fan 3 error (the actual fan speed is outside the desired speed)
		0	Temperature 1 error (over limited temperature)
۲	۲	0	Thermal IC #2 I2C Connection error

# Troubleshooting

#### The projector does not turn on.

Cause	Remedy			
There is no power from the power cord.	Plug the power cord into the AC power jack on the projector, and plug the power cord into the power outlet. If the power outlet has a switch, make sure that it is switched on.			
Attempting to turn the projector on again during the cooling process.	Wait until the cooling down process has completed.			

#### No picture

Cause	Remedy		
The video source is not turned on or connected correctly.	Turn the video source on and check that the signal cable is connected correctly.		
The projector is not correctly connected to the input signal device.	Check the connection.		
The input signal has not been correctly selected.	Select the correct input signal with the $\Rightarrow$ (SOURCE) key.		

#### ) Blurred image

7

2

2

Cause	Remedy			
The projection lens is not correctly focused.	Adjust the focus of the lens using the focus ring.			
The projector and the screen are not aligned properly.	Adjust the projection angle and direction as well as the height of the projector if necessary.			

#### Remote control does not work.

Cause	Remedy		
The batteries are out of power.	Replace both of the batteries with new ones.		
There is an obstacle between the remote control and the projector.	Remove the obstacle.		
You are too far away from the projector.	Stand within 8 meters (26 feet) of the projector.		

#### The password is incorrect.

Cause	Remedy			
You do not remember the password.	See Entering the password recall procedure on page 27.
